# Highlights for October 2024 Data

- PV capacity additions are 4,113 MW; wind capacity additions are 76 MW.
  - MW = megawatts; GW = gigawatts (1000 MW); TW = terawatts (1000 GW)
- PV and Wind generated 19.8% of total U.S. electricity generation in October with PV generating 7.8% and wind 12.0%.
- PV panel imports declined to \$709 million, and PV cell imports decreased to \$155 million. This trend is expected due to significant increases in U.S. PV manufacturing capacity, largely assembly.
- For the month of December, the TAN ETF (solar) share price declined 9.6%, and the FAN ETF (wind) share price declined 8.1%.

# Slideshow Objectives

- To Document Monthly and Annual Growth in PV and Wind Capacity and Electricity Generation
  - MW = megawatts; GW = gigawatts; TW = terawatts; MT = thousand metric tons (polysilicon)
- PV and Wind Capacity Additions
  - The Graphs Show Current and Past Year Monthly PV and Wind Capacity Additions
  - For Perspective, Compare Current Monthly Capacity Additions to the Long-Term Goals
    - U.S. PV Long-Term Goal (2040 forward)
      - Monthly Average – 8 GW of Capacity Additions
      - Annual Average – 96 GW of Capacity Additions
    - U.S. Wind Long-Term Goal (2040 forward)
      - Monthly Average – 4 GW of Capacity Additions
      - Annual Average – 48 GW of Capacity Additions
    - World PV Long-Term Goal (2040 forward)
      - Annual Average – 700 GW of Capacity Additions
    - World Wind Long-Term Goal (2040 forward)
      - Annual Average – 300 GW of Capacity Additions
- Slides Present U.S. Monthly PV, Wind and Fossil Fuel Electricity Generation to Show Seasonality
